

At CCFI our furniture is manufactured to the highest standard and to help maintain its quality we provide the following guidelines:

## Maintenance

The life of your furniture may be shortened if you do not undertake regular maintenance or safeguard against improper use, such as:

Placing furniture manufactured from solid timber too close to radiators or other sources of heat may cause the timber to split or the lacquer to craze.

Wooden chairs are best suited to carpeted areas, rather than wooden or stone flooring. Chair leg glides can be fitted to give added protection for floors.

Tables, chairs and stools should be checked at least every six months and nuts tightened on the table joints.

*At CCFI we strive to offer a high quality product and service, however despite all our efforts, problems do arise. In such circumstances please do not hesitate to contact us to report any problems you may have; reported issues will be investigated as necessary and where applicable will be dealt with according to our Terms and Conditions.*

## Cleaning

### Bedroom

(Wardrobes, Chest of Drawers, Bedside Cabinets, etc)

- ✓ To clean we suggest using a warm, damp and slightly soapy cloth to wipe over surfaces.
- ✗ Do not use spray cleaners or wax as they build up and spoil the appearance.

### Tables and Tops

- ✓ Use warm damp and slightly soapy cloth to wipe over surfaces.
- ✓ Tablemats must be used to protect polished surfaces from direct heat.
- ✗ Do not use any spray cleaners or wax as they build up and spoil the appearance.

### Chairs and Upholstered Goods

#### Wooden surfaces

- ✓ Use warm damp and slightly soapy cloth to wipe over surfaces.
- ✗ Do not use any spray cleaners or wax as they build up and spoil the appearance.

#### Fabrics

We suggest that you refer to the manufacturers guidelines to ensure the appropriate methods and solutions used are relevant to the fabric.
